Education

•Bachelor of Technology in Artificial Intelligence & Machine Learning *Expected Jan 2027*
Bikaner Technical University (MITRC), Alwar, India GPA: 9.34 / 10.0

Experience

•Machine Learning Intern *Jan 2025 – Mar 2025*
Upflairs Alwar, IN

– Built and evaluated supervised ML models (classification & regression) on real-world datasets using Scikit-learn, achieving improved prediction accuracy through systematic hyperparameter tuning.
– Performed end-to-end data workflows: data cleaning, preprocessing, and EDA using Pandas and NumPy on structured datasets.
– Developed interactive Power BI and Tableau dashboards to visualize key business trends, enabling data-driven decision-making for stakeholders.
– Gained hands-on experience in model deployment pipelines, bridging the gap between model development and production-ready outputs.

Personal Projects

•AI-Based Crop Disease Detection System
Deep learning system using CNNs to classify plant diseases from leaf images via a Flask web app. GitHub

– Developed a deep learning-based crop disease detection system using Convolutional Neural Networks (CNNs) to classify plant diseases from leaf images.
– Implemented image preprocessing, data augmentation, and model training using TensorFlow and Keras to improve prediction accuracy and model generalization.
– Built a Flask-based web application for real-time disease prediction, enabling users to upload crop images and receive instant diagnostic results.
– Technology Used: Python, TensorFlow, Keras, Flask, CNNs.

•RAG-Based Medical Chat Assistant
Medical AI assistant using Retrieval-Augmented Generation (RAG) and LLMs for healthcare info retrieval. GitHub

– Developed a medical AI assistant using RAG and Large Language Models (LLMs) for context-aware healthcare information retrieval.
– Implemented document processing, embeddings, and semantic search using LangChain and FAISS to enhance response accuracy.
– Built an interactive chat interface with Python and Flask, enabling efficient and reliable access to medical information.
– Technology Used: Python, LangChain, FAISS, LLMs, Flask.

•Customer Behavior Analysis Dashboard
Analytics solution using Python and PostgreSQL to identify purchasing patterns and business insights. GitHub

– Developed a customer behavior analytics solution using Python and PostgreSQL to process, analyze, and manage large customer datasets.
– Performed data cleaning, exploratory data analysis (EDA), and feature engineering to identify purchasing patterns, customer segments, and business insights.
– Designed interactive Power BI dashboards to visualize key performance metrics, customer trends, and decision-support analytics.
– Technology Used: Python, PostgreSQL, Pandas, Power BI.

Technical Skills and Interests

Languages: Python, JavaScript, SQL
Frameworks & Technologies: React.js, Flask, FastAPI
Machine Learning: Scikit-learn, Data Preprocessing, Feature Engineering
Deep Learning: TensorFlow, PyTorch, CNNs, Transfer Learning
Generative AI & NLP: LangChain, RAG, LLMs, Vector Databases, Embeddings, GPT APIs
Data Analytics & Visualization: Pandas, NumPy, Power BI, Tableau, Plotly
Databases & Tools: MySQL, PostgreSQL, Git, GitHub
DevOps & MLOps: Docker, Kubernetes, Jenkins, CI/CD Pipelines, DVC (Data Version Control)
Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Data Structures & Algorithms, Database Management Systems, Computer Vision.
Areas of Interest: Generative AI, MLOps, Computer Vision, Cloud AI.
Soft Skills: Problem Solving, Self-learning, Adaptability, Presentation

Certifications

- **NLP, Deep Learning & GPT Technologies**
- **Cloud AI & Generative AI Tools**
- **Prompt Engineering & Cloud AI**
